Photos	diff-Schmedt-Präform-21-50	Schmedt	Präform 21-50	2016		Case Bender	614	<p>Case Bender: Book sizes: Thickness: 6.5-100 mm, Width: 20-450 mm, Height: 100-520 mm, Output: 150 pcs/h.</p> <p>The PräForm is a machine to press books after casing-in, setting the joint at the same time. It is especially designed to be used together with the PräLeg casing-in machine and processes single books as well as series of books. The PräForm is equipped with two light-metal pressing plates of 520 x 450 mm and with heated joint formers. The machine is factory-equipped with rounded ("bull-nose") joint formers for gentle joint-setting especially for cellophaned and laminated papers as well as other binding materials such as cloth. The pressure of the joint formers is adjustable independant of the pressing plates by regulating the air pressure and may therefore be adapted to the binding material used and the joint depth required. The temperature of the joint formers is controlled by touchscreen and is set according to the requirements of glue, binding material and also working speed. A light-line helps to align the book for single books. For serial production, an adjustable back stop helps to speed up alignment. The pressing time may also be adjusted by touch-screen. After this period of time, the press opens automatically and the book can be taken out.</p> <p>Therefore, the working cycle can be adapted precisely to the casing-in speed, i. e. the PräForm is already open when the next book is to be inserted. This speeds up the working process considerably. The press may also be opened manually by push-button any time.</p>	ASK
